N-IP-GASKET / Mounting gasket

A rubber gasket for sealing the gap between the mounting base and the mounting surface, and the seam between the mounting base and the installed device.

- With the seal and the lights that can be turned to the N series base, the tightness class is IP55.
- Easy to install
- Can also be used in the installation of fire detectors, to remove the detector from a cold surface and to improve the tightness between the base and the detector, however, this does not increase the Ip rating of the detectors.

SKU	8005988
Product series	Neptolux, Firescape

Technical data

Net weight (kg)	0.069
